Invitation to NIAC 2024

To whom it may concern,

The NeXus International Advisory Committee (NIAC) hereby invites its members to its biennial meeting at the European Synchrotron Radiation Facility in Grenoble, France, Sept 27th-Sept 30th 2024. The committee's charter includes meeting every two years in person to discuss business relevant to its members regarding the NeXus format, used world wide at X-ray, Neutron, and Muon facilities for data storage and metadata representation. This year, we will be paying special attention to a series of new proposals from the FAIRMAT initiative which adds to NeXus specifications for optical spectroscopy, multi-dimensional photoemission spectroscopy, atom probe microscopy, electron microscopy, transport measurements, geometry and microstructures, among others.

The biennial meeting is the best time for the committee to gather and develop the project and we hope for attendance by as many of its members as possible. We look forward to seeing you in Grenoble.

Respectfully submitted,
